

Smartphones Sterilization machine Designed for Samsung White Samsung

Descriptif produit

Eliminates 99% of bacteria

A protective tool

Ideal for your everyday items such as smartphones, keys, glasses, or any other small objects. Protect your home from bacteria with this UV sterilization case. Enjoy a spacious design sized for products as large as the Galaxy S20 Ultra.

Kills 99% of bacteria

The effectiveness of this UV sterilization case has been tested and proven by laboratories to eliminate up to 99% of bacteria in 10 minutes*, including Escherichia coli, Staphylococcus, and Candida albicans. Thanks to the intensity of its rays, UV light destroys the molecular chains of bacteria, thus preventing their reproduction and spread. Equipped with two UV lamps, this device disinfects both the top and bottom surfaces of your items.

Equipped with wireless charging

Disinfect and charge your device at the same time! The UV sterilization case is designed to charge your Qi-compatible devices. The charger continues to operate even after the UV sterilization process is complete.

A magnetic closure you'll appreciate

The magnetic lid ensures a tight seal and a secure feel when opening and closing the case. Its flexible, free-angle hinge and silicone button provide a soft and pleasant touch.
