

Bluetooth® Headphones X-Vibes bone conduction with Microphone Over-ear Black Crosscall

Descriptif produit

Headphones for a different kind of listening : Thanks to bone conduction technology, you can enjoy optimal listening comfort

Is there anything more like a headset than another headset? Think again! There are the classic over-ear and in-ear headphones, and then there are the ones that take a different route like the X-VIBES. Thanks to bone conduction technology, you can enjoy optimal listening comfort while keeping your ears free and aware of your surroundings. Whether you're in an open space, on the move or in transit, experience the incredible sound from within that doesn't cut you off from the outside world. The X-VIBES is the ideal Bluetooth headset for clear and efficient communication and listening to all your audio content. For your podcasts, video conferences, phone calls and music, it will make you forget about it thanks to its weight and its extraordinary autonomy.

Bone conduction technology

Vibrate your way to a new experience.

You may not know about bone conduction technology, but this innovation has a lot to offer! Instead of being transmitted by air vibrations through speakers, sound is transmitted through the temporal bone and then delivered directly to the cochlea (inner ear). As the sound bypasses the eardrums, there is no risk of overloading and damaging them. In addition, your ears remain free and alert to the sounds around you. You enjoy all the benefits of high quality listening while remaining aware of your surroundings. A real plus for your safety, whether you are on the move, on the road, on a construction site or in the office.

Ergonomics

Try it and forget it! The X-VIBES is the perfect companion to the X-VIBES, yet it will be forgotten all day long. This is logical since the X-VIBES is an ergonomic bone conduction headset that weighs only 34g. The choice of materials, including the titanium ring, the soft touch finish and the weight distribution have all been designed to offer you excellent support and comfort in all your activities. Become the conductor of your headset in an almost instinctive way thanks to the ideal positioning of the control buttons for taking a call or adjusting the volume. Wear it first thing in the morning for your jogging, during long business meetings, and on the way home from work. At home, call a friend without disturbing the people around you... Good to know: For an even more immersive listening experience, use the earplugs supplied with the X-VIBES and benefit from increased bone resonance.

Communication

Received 5 out of 5

Sound quality is essential for clear and effective communication, especially in a professional context. That's why intelligibility was a key objective during the design of the X-VIBES. Carefully designed and positioned MEMS microphones, digital signal processing via algorithms implemented in the Qualcomm processor, and the choice of Environmental Noise Cancelling (ENC) technology. The result is that when you make a call or video conference, the person you're talking to will hear you clearly, without being disturbed by ambient noise, which can be very disturbing.

Push-to-Talk Compatible: Communicate like a walkie-talkie with a simple push of the multifunction button thanks to the X-VIBES' compatibility with group communication applications such as Crosscall's X-TALK.

Autonomy

You can't stop it You like it when your accessories are as full of energy as you are? Then you've found the perfect companion with the X-VIBES and its 10 hours of autonomy while listening to music or talking, and up to 10 days on standby. This performance is made possible by its 200 mAh battery, which is particularly useful when your headphones accompany you all day long, at work, on the road, or during all your sporting or outdoor activities. Charging is simple thanks to its universal USB-C charging connector. Just 1.5 hours of charging will give you 100% battery life again.

Durability

A story made to last...

Leading the way in durability with its ultra-strong and long-lasting smartphones and tablets, CROSSCALL has provided its headphones with the same DNA. The X-VIBES has an optimal level of resistance and waterproofing to accompany you everywhere. So you can make calls, listen to your favourite podcasts or playlist in the most intense everyday conditions as well as in the most demanding working environments (rain, snow, wind, extreme temperatures...). And there's no nasty surprise if you drop it either. Not only can it be submerged to a depth of 1m (IP67 standard) but it can also withstand falls from a height of 1m80. Finally, its guarantee protects you for 2 years. So you can look forward to a long term relationship...

Technical characteristics

Bluetooth: QCC3024

Speaker type: Bone conduction speaker, 1w dual speaker

Battery Capacity: 200mAh, Voltage: 3.7V, Temperature: -20 +50°C, Weight: approx. 4g, Type : Lithium-Ion Polymer

Microphone: Dual noise-cancelling microphone (GoerTek MEMS, model: S150T381-015)

Talk time: 10 hours at 100% volume, 12 hours at 75% volume

Standby time: 10 days

Effective range: 10 meters

Mono/Stereo: Stereo

Bluetooth version: 5.1

Weight: 34 grams

Bluetooth Class (1/II) : Class II

Bluetooth profile: a2dp/HFP,HSP,AVRCP,GAVDP,AVDTP

Receive sensitivity: 88 dBm Impedance8Ω

Compatible Bluetooth®

Color : Black

Ref : CROSSXVIBESN

EAN : 3700764722572

Pack contents : Bluetooth® Headphones X-Vibes bone conduction with Microphone Over-ear + USB C Charging Cable + Carrying pouch + Earplugs + User Guide/Security/Warranty

Frequency range: 20-20KHz
FM/MP3: No
Charger: USB-C charger - Recharges in 1h30
Cable length: 60cm
TF card : No
System language: English
Operating temperature: -10°C / +50°C
IP rating: IP67
Water resistance: 1m / 30mn
Drop test: 1.8 m

Compatible mobiles

Compatibilité

Compatible avec : IPHONE 3G .
